Renton Airport Noise Study scope / Methods

9/25/07-9/26/07

Thank you for your participation!

Welcome to this community discussion of the scope and methods to be used in the upcoming "Airport Noise Study." The Noise Study will model the potential effects of development alternatives being considered by the City of Renton for the Renton Airport. The study is a collaboration by the City of Mercer Island and the City of Renton, pursuant to a memorandum of understanding acknowledging citizen questions about future changes at the airport, and an interlocal agreement (formal partnership under State law) enabling the cities to share the cost of this study.

Renton and Mercer Island have chosen the firm Harris Miller Miller & Hanson Inc. to conduct the study, and have jointly prepared a tentative scope of work. Your comments are welcome in writing on this form—on the proposed scope, and on the presentation of results when the study is completed.

Please send this completed form to either address listed below, or email to the addresses at the bottom of the form:
